HR 808-1064nm

Even more effective
epilation using a **dual
wavelength system.**

**Diode laser Mantis HR Black Mamba
is your best ally for laser epilation
for all phototypes.**

The **highest degree of performance** using
a **single handpiece** that operates at two
levels of depth.

This allows to treat a **wider range of clients**
throughout the year, and is delicate on the skin.

HR 808-1064nm

INNOVATIVE

The innovation characterising **HR Black Mamba** consist in two **new systems ACS** and **TMS**, which guarantee absolute performance.

SAFE

Tests carried out at Mantis laboratories have demonstrated the maximum efficiency in complete safety, both in the short and the long term.

HIGH-POWER

Its high power, which acts over very short time intervals, allows the effective treatment of finer hair such as those on the face.

PAINLESS

The exclusive and efficient cooling system produces **excellent results** with no discomfort and includes parameters that can be adjusted depending on the treated area.

EFFECTIVE

HR Black Mamba technology satisfies the most demanding requirements of professionals owing to the excellent results it produces that are visible from the very first treatment.

FAST

HR Black Mamba guarantees excellent results in a very short time, reducing the number of required sessions.

All the Mantis technology in just one, **single** **handpiece.**

The patented source and low weight allow the **Black Mamba handpiece** the highest degrees of performance, making the treatment a unique and pleasurable experience for the operator.

*A laser that combines **innovative features** and a **unique design** make this an **important piece** of technology.*

New Dynamic Cooling System

An **exclusive dynamic cooling system** allows HR Black Mamba to maintain the highest **degrees of performance** throughout the treatment, guaranteeing the **same temperature** from the first pulse to the last on the skin, even in the most sensitive areas.

The thermal capacity of the laser source is enhanced by the ACS - Active Cooling System, guaranteeing virtually unlimited treatment times and increasing the thermal capacity of the entire laser system.

The software electronically controls the temperature and measures the water flow, thus making it possible to prevent the most common faults that tend to occur in less evolved laser systems.

Why ACS and TMS make the difference

Safe treatment
on all phototypes.
Fast and painless
results.

The inclusion of the 1064YAG wavelength allows a lower absorption by the melanin to guarantee deeper action.

This feature permits safe and complete epilation even on darker phototypes and on tanned skins.

Mantis HR Black Mamba technology make possible to work in a safe and effective operation, using pre-set work protocols, which guide the operator in an assisted way.

Type 1

Fair skin
Red or light
blonde hair
Numerous freckles

Type 2

Fair skin
Blonde hair

Type 3

Golden fair skin
Dark blonde or
light brown hair

Type 4

Olive skin
Brown hair

Type 5

Dark skin
Dark brown hair

Type 6

Black skin
Black hair

Mantis Care System

Tele-assistance is a **remote technical support system** that provides direct or indirect interaction with the equipment. **Mantis technicians intervene remotely**, without the need to intervene on site, guaranteeing **continual** and **effective** supervision.

**BLACK
MAMBA**

Dual
wavelength.
Power, control,
safety.

The **808 wavelength** has an intense absorption of melanin and a **deep action** in the follicle. The **1064 YAG wavelength** has a **low absorption** of melanin and even a **deeper photoepilation**, reaching beyond the bulb, also the papilla.
